

An Inconvenient Moovie

An Illustrated Mockumentary

Author: Patty Wallis

Opening scene #1: (Camera focuses on Farmer Brown entering his barn)

[Farmer Brown, dressed in his overalls, plaid shirt and straw hat is securing the cow stalls before nightfall. Several cows have already lined up at the hayrack munching straw. An old TV set is mounted in the corner of the barn and is always left on to soothe the cows and for Farmer Brown to keep up with 'World News Tonight.' The anchorman is reporting.] (Camera switches to the TV anchorman.)

Anchorman Ukan Believit:

Good evening from TV Channel WFRT with the latest worldwide news. Believe it or not, but flatulent cows are being blamed for global warming. They are considered such a threat that millions of dollars are being spent by various governments around the world to fight this evil scourge, to try to prevent the certain devastation that will be caused by the cows' noxious emissions.

There are approximately 1.5 billion farting and belching cows and 6.5 billion farting and belching humans in the world. Some experts consider cows to be the world's biggest single source of methane gas. In 2005 a scientific report published in California claimed that each dairy cow in the area was producing almost 20 pounds of gas every year (They learned this by putting cows in a bio bubble that measured emissions for two days). The claim by the UN is that cows produce more greenhouse gases than all the SUVs, airplanes, trucks and cars combined. The figures on what percentage of all greenhouse emissions they account for range from 5 percent up to one third. All this methane gas is produced when the bacteria in their stomachs breaks down plant

fibers; the gas then comes out one end when they chew their cuds, and the other end when they fart.

The World Government is planning to put a carbon tax on all cows because they are contributing to greenhouse gases and global warming by the amount of flatulence they expel into the atmosphere. Their farts and belches contain methane, a highly flammable gas. To curb these effluents, the World Court is considering reducing the bovine population and urging people to eat less beef.

(Camera switches to Farmer Brown as he mumbles his objections to this news.)

Farmer Brown: Those crazy, whacked out scientists are at it again! Try'n to control the climate by control'n cow farts! Talk'n about methane gas . . . HOG WASH! Oh yeah! It may be smelly, but it ain't flammable!

[Farmer Brown reaches for his corncob pipe in his overalls as he stands directly behind a cow. He strikes a match just as ol' Bessie lets out a powerful FART (fart sound effect). A shooting flame 10' long erupts from the cow's anus and almost knocks Farmer Brown off his feet. Black soot covers his face and shirt from the fiery blast.]

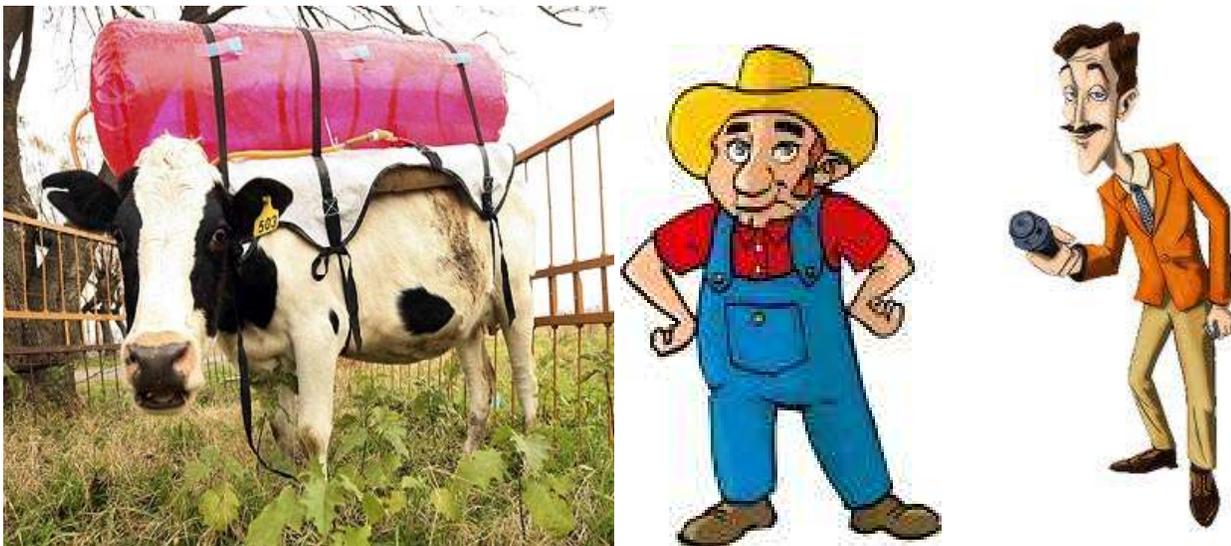

(The scene switches back to TV Channel WFRT and anchorman Ukan Believit is continuing his report.)

Scene #2 -

Anchorman Ukan Believit: We now join our field reporter, Cash Carbon, in Argentina. He will be reporting on a Cow Fart Study being conducted in Argentina. The cow's emissions are being collected in a plastic tank for analysis of the methane gas/carbon pollution for a global warming study. Cash, please give us the latest on that unique experiment being conducted down there.

Cash Carbon: I'm here with dairy farmer, Juan Goodman, to learn about an interesting experiment that he has recently begun. Mr. Goodman has devised a method for testing the amount of emissions being released into the environment by a single cow. He is collecting the methane gas produced by his cow in an effort to determine its impact on global warming. All of the gases are being collected in a plastic tank that is attached to his cow's back. His experiment will prove that cow farts account for more than 30 per cent of the country's total greenhouse emissions and are a major cause of global warming.

Cash Carbon: Hello Mr. Goodman. Please explain your experiment to our viewers.

Juan Goodman: Well, my experiment is really quite simple. My cow, Molly, has my unique invention, the flatumeter, inserted into her anus which measures the amount of methane gas she emits over a 24-hour period. The expelled gases are collected in this tank mounted on her back. Then it is simply a matter of multiplication to determine the amount of gases expelled in a 24-hour period by the total number of cows on the planet. Already, we have determined that it's a huge, incredible amount.

We're also studying ways to store these emissions that we collect, which are quite volatile and heat producing, to replace petrol. Just imagine cars running on a natural substance that is plentiful and readily available. These methane emissions may actually exceed our milk production capacity. Large herds that are producing milk may also be used to collect methane gas. So you can see, this will become a very energy efficient and profitable business, as well as reducing carbon emissions into the atmosphere. We plan to have about 20,000 cattle outfitted with the flatumeters within the next week. There is also a plan afoot to sell carbon credits for the fart gases that are collected by our flatumeters.

Cash Carbon: Thank you Mr. Goodman for this exciting news. It's people like you who will make a difference in reducing the carbon footprints by cattle on our planet. Thank you for what you're doing to help reduce greenhouse gases that cause global warming.

(Scene fades)

Scene #3 - ["Green" Terrorists are watching this broadcast while they are busy working in their assembly room making suicide vests.]

"Green" terrorist, Bubba Blastingcap: Hey you guys, what a great idea! You know how environmentally conscious we are, trying to go 'green' to save the planet. We can collect these flatumeters from cows and make our suicide bomb vests using these devices for our explosive material. These 'green' explosives won't harm the environment the way our current bombs do – besides, for each person we eliminate with our green bombs, including ourselves, we reduce human carbon footprints.

"Green" terrorist, Jemal Bombalama: Let's contact our sleeper cells in Argentina and tell them to collect flatumeters for our Suicide Fart Vests. (Scene fades)

Scene #4 – (One week later)

[Three "green" terrorists are surrounded by flatumeters laid out on a table with Jemal Bombalama modeling the new improved fart vest for his comrades. They're satisfied that this new vest will do the job and they are very proud of the fact that they are helping to save the environment with their new 'green' explosives.] (Scene fades)

SCENE # 5 - [Anchorman Ukan Believit is beginning his evening broadcast.]

Ukan Believit: Good evening Channel WFRT viewers. Tonight we go directly to our field reporter, Rosie Tumbleweed, who has secured an interview with the leader of a group calling themselves 'Green' Terrorists.

Rosie Tumbleweed: Mr. Bombalama, I understand that you terrorists have decided to go “green” with your suicide bomb vests. Your group is now constructing them using methane gas that is collected from cows in the newly invented flatumeters.

Unfortunately, numerous local farmers have reported that their herds are missing the devices soon after they are inserted. Many fingers are pointing at your group as the methane gas robbers. Do you care to make a comment?

Jemal Bombalama: Why yes, Ms. Tumbleweed, I would like to say that our “green group” has decided to focus on making suicide vests from these naturally occurring gases that are readily available from any cow pasture. As a matter of fact, we’ve decided that these plenteous and easily obtainable gases would be ideal to build our Mooclear bombs as well, bombs that are capable of large scale devastation, much more so than our green Suicide Fart Vests. By using these natural gases as explosives, we are causing less damage to the environment because there is no radiation involved when they explode. So you see, we terrorists are mindful of the environment and carbon emissions and wish to minimize damage to the fragile earth atmosphere and do what we can to prevent global warming. You must remember that for each person we kill, including ourselves, we are reducing carbon footprints dramatically and are helping Mother Earth sustain herself.

Rosie Tumbleweed: Thank you for being so candid, Mr. Bombalama. I’m sure there are many peoples around the world who would applaud your sensitivity to the global

warming issue caused by excess carbon (CO₂) in the atmosphere. Thank you for going 'green.' Now, back to the studio . . . (Scene fades)

SCENE # 6 – (Back at the anchor desk)

Anchorman Ukan Believit: We have two guests joining us tonight at the anchor desk here in Washington, DC who will be discussing this very subject, Global Warming, and it causes and effects. Our first guest is Dr. Hide Decline, who is a staunch advocate of the global warming trend that he claims is being detected around the globe for the last decade. He'll present us with a chart showing the climbing temperatures and what can be expected as a result of these climate changes.

Our other guest is Dr. Notso Fast. Dr. Fast has been a student of global climate trends for 30 years and he is equally adamant that mankind and flatulent cattle are not producing enough greenhouse gases to impact the climate.

Anchorman Ukan Believit: We will begin our discussion with Dr. Decline. . . Dr. Decline, please show us what has become known as your hockey stick chart and explain it to our audience.

Dr. Decline: As you can see from my chart, there has been a steady progression of greenhouse gases being emitted into our atmosphere as the human and cattle populations have grown dramatically since I began my study. (Shows chart.) I firmly believe the answer to our growing dilemma lies in reducing the populations of both cattle AND humans. I, and others like me, also postulate that humankind should cut their consumption of beef by 75%, which will eliminate the excess cattle that are being bred for food.

Anchorman Ukan Believit: And HOW, Dr. Decline, do you propose to reduce the human population?

Dr. Decline: Quite simply, we have plans to reduce human copulation . . . I mean, **population** by introducing mandatory sexometers into every bedroom in Amerika to measure the amount of CO₂ that is being exhaled into the atmosphere by heavy breathing. Every household will pay a carbon tax when they exceed the allowable limits per night. This monitoring will continue until we reach an acceptable level of humans to sustain the earth's atmosphere, which we estimate to be about 10% of the current population. If these measures fail, there will be more stringent constraints put

in place. And, we must remember, this effort is being aided by the 'green' terrorists that were interviewed on your show earlier tonight.

Dr. Notso Fast: Dr. Decline, YOU LIE!!! There is no evidence that human pollution or cow farts are heating up the earth – the global changes are caused by cyclical sunspot activity and other natural occurrences.

Dr. Decline: No! That is untrue! People and cows are causing global warming! Just ask Al Gorfioni!

Dr. Notso Fast: Al Gorfioni is just getting rich by his scheme to sell carbon credits. It's a big lie, I tell you!!

[A BRAWL erupts between the two 'experts' when Dr. Decline grabs Dr. Fast's tie and they start trading punches.] (Scene fades)

SCENE # 7 - (The following evening at Channel WFRT)

Anchorman Ukan Believit: Good evening, viewers. Tonight, we again join our field reporter, Cash Carbon, as he follows up on an interview he had last year with a village leader in Papua, New Guinea. Under his leadership, the village has traded 2 million acres of virgin forestland for \$300M in carbon credits.

You see, Al Gorfioni's scheme, I mean plan, is to sell these carbon credits to the developed countries so they can continue to pollute their regions as an offset to areas

of the world where the air is pristine and there is no pollution from factories. It's sort of a balancing act, if you will. Now we go to our field reporter for a first-hand report.

(Scene shifts to Field Reporter, Cash Carbon)

Cash Carbon: My greetings to our entire viewing audience from deep in the heart of Papua, New Guinea.

I'm here to follow-up on a carbon credit plan that has been described by some as a flimflam that enables polluting industries to continue to pour carbon dioxide (CO₂) into the atmosphere since said pollution is offset by the clean air in pristine areas of the world like where I am standing right now.

Last year, soon after a carbon credit offset that was too good to refuse was finalized by Al Gorlioni with the village leader, this territory was covered in virgin forests. Its natives were living in primitive conditions with few worldly goods.

Joining me now is the village leader, Mr. Changeisgood, a nobleman who has taken the time to tell us how the natives are adjusting to their newfound wealth that resulted from selling carbon credits to Amerika.

(Camera pans to Changeisgood) [He steps out of a fancy car with oversized wheels and gold hubcaps. He is decked out in bling of every description: gold chains, large gold earrings, gold nose ring, etc.]

Cash Carbon: (Speaking through an interpreter): Tell me, Mr. Changeisgood, how has your world changed since we met last year?

Changeisgood: (Talking in his native tongue through a translator.) We Guineans is MORE dan happy wid the turn of events. Evyting is, how you say, HUNKY DORY! Befo, I could only afford three wives, but now I has ten! HoooWeee!!! [Changeisgood spins around, slapping his knee and laughing]

Cash Carbon: But, but, but . . . on the drive up here, I noticed that the forests are being cleared and huge mansions are replacing the grass huts! Big swimming pools are everywhere!

Changeisgood: Yes-s-s, my man, dis is de life! We all is so-o-o-o happy here now! We don't has to hoe no mo', no plantin', no dig'n, nuthin'. We just has our food shipped in now. We's plannin' to build us some roads and gits us some of dem pick um up trucks

to rides around in. No need fo' us to walk when we kins ride! Ho, man, we all jus' loves Al Gorfioni and his carbon credits! [bending over, laughing]

Cash Carbon: But, but, but . . . the forests that you've cleared took in carbon dioxide that we, and all animals, breathe out, and the trees would then convert it and release oxygen back into the air that we all breathe in. We'll all choke to death if this continues!! The forests will all be gone very soon if this keeps up!

Changeisgood: (Grinning from ear to ear) I don't know 'bout all dat, but we is HAPPY! HAPPY! HAPPY!!!

Cash Carbon: (Worried expression and sputtering) I don't know . . . what a mistake . . . what a mess . . . this is terrible!! We're all doomed! Doomed I tell you! What can we do now?!!

[Cash Carbon throws down his WFRT microphone and is holding his head with both of his hands. He is crying and having a nervous breakdown. He falls on the ground and pounds the earth with his hands.] (Scene fades)

SCENE # 8 -

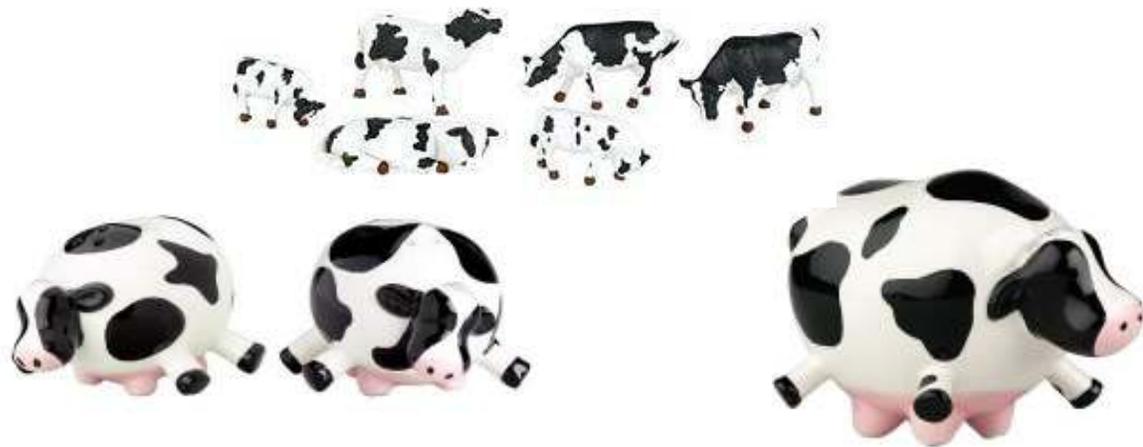

(News desk in Washington, DC with anchorman Ukan Believit.)

Ukan Believit: Breaking news from New Jersey! An airline pilot has reported a huge fleet of UFO's floating over the Township of Manchester. They're described as clusters of large black and white objects bobbing around at 3,000 ft. We have a reporter on the scene and we now join Betta Foolya for a first-hand report!

(Scene shifts to field reporter.)

Betta Foolya: It's amazing! Nothing like this has ever happened before! I'm standing here in farmer Riddle's pasture and he's reporting that his entire herd of 200 black and white Holsteins have disappeared overnight. Early this morning, his neighbors reported seeing large black and white UFO's overhead, bobbing up and down and carried by the winds. When I arrived on the scene, they were still visible to the naked eye, but many of these objects have now floated out of sight. There's speculation that these objects are the missing cows from farmer Riddle's pasture that have somehow become airborne. It's a real puzzle and we're expecting investigators from the DOD to arrive at any moment. Wait a minute; I see an approaching government vehicle. We'll try and get a few questions answered. (Scene fades)

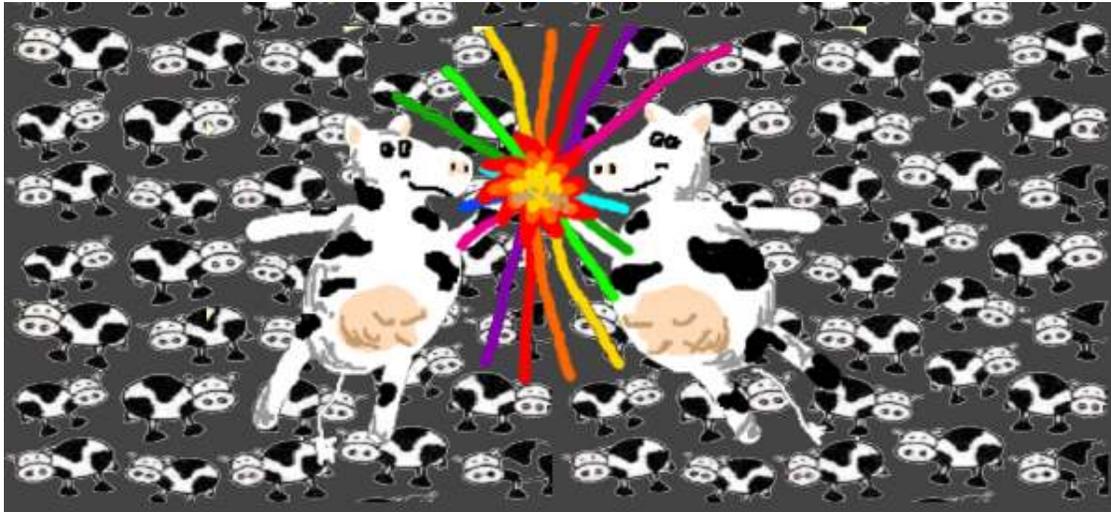

Betta Foolya: I have standing with me right now CIA investigator, Slim Tightbuns, who has just arrived. Mr. Tightbuns, what do you think is going on?

Mr. Tightbuns: We've already determined that these UFO's are farmer Riddle's black and white Holsteins. The mystery is: how are they floating? We must determine that as soon as possible.

Betta Foolya: Farmer Riddle, do you have any idea how your cows floated away?

Farmer Riddle: Three days ago, we installed flatumeters into my herd's rectums to measure emissions. My assistant told me a few minutes ago that he forgot to release the baffles that allow the excess gases to go back into the air. The resulting build-up of gas has bloated them to the point that they've floated away. Let's just pray that no sparks or ignitions come near the cows or they'll explode.

[The scene shifts to the 'green' terrorists in an adjacent field. One of them is aiming a shoulder fired missile at a floating cow. It sets off a chain reaction and blows up the entire herd. Upon seeing the success of their trial Mooclear bomb, the three of them are jumping up and down and rejoicing about their newfound weapon.]

'Green' Terrorist, Jemal Bombalama: (Waving his arms and dancing around.) Oh, you non-believers, you infidels!! Our fart vests were limited, but soon you will **die, die, die** by our Mooclear bombs!!

(Turning to his buddies.) Now my brothers, we only have to set off our Mooclear bombs whenever and wherever we wish. Here's the plan. We and our fellow global warming activists/terrorists will insert flatumeters into herds of cattle and lock the baffles so that no methane gases escape. On the third night the cows will bloat and float up to drift in the prevailing winds. When they are over our targets, we'll fire our ignition missiles and the non-compliant polluters will be blasted with fiery methane gases and thousands of cow hoofs and horns!!! Ha-Ha-Ha-a-a-ah!!

(Scene fades)

SCENE # 9 – (SIX MONTHS LATER at the WFRT anchor desk in Washington, DC)

Ukan Believit: Our lead story tonight is right here in Washington, DC. President Oflimflama, recently back from his trip to Hoaxenhagen, will address the nation tonight

concerning the newest threat to our nation's safety and security – Mooclear Bombs. Some of you may be familiar with the incident that occurred last year in New Jersey, when farmer Riddle's entire herd of 200 black and white Holstein cows became airborne after faulty insertion of methane gas collecting flatumeters. When the excess gases could not escape, the resulting bloating caused the herd to become airborne.

A shoulder fired missile from a terrorist struck one of the cows, setting off a chain reaction and the entire herd was lost in the resulting explosion. These Mooclear Bombs could be lethal if exploded at lower altitudes. The 'green' terrorists claimed responsibility for farmer Riddle's cows being blown to bits and are now threatening to use these improvised 'green' explosives to do our nation, and indeed the world, great harm. They plan to reduce carbon footprints by eliminating large portions of the earth's inhabitants (animals included) who, by their very act of breathing and farting, release large amounts of CO₂ into the atmosphere, thereby causing global warming.

Their most recently released video, touting their sensitivity to the environment, shows a demonstration of their green suicide fart vests that use cattle flatumeters as the explosives. Several of the terrorists blew themselves up while perfecting their devices. Now they claim that they have worked out the kinks and are threatening to use flatumeters to float Mooclear bombs over targets. These Mooclear bombs will be their newest 'green' weapon. President Oflimflama, in his speech tonight, is expected to ban the use of these flatumeter devices because of the danger posed by the terrorists and their easy access to these potential weapons.

This is fast becoming a CRISIS situation people! We expect President Oflimflama to address the issue directly from the White House at any moment now.

This just in from our correspondent in Venezuela! He's reporting that a huge black and white mass, measuring at least one-mile in diameter, is hovering over the capital city of Caracas tonight! Could it be Mooclear bombs?

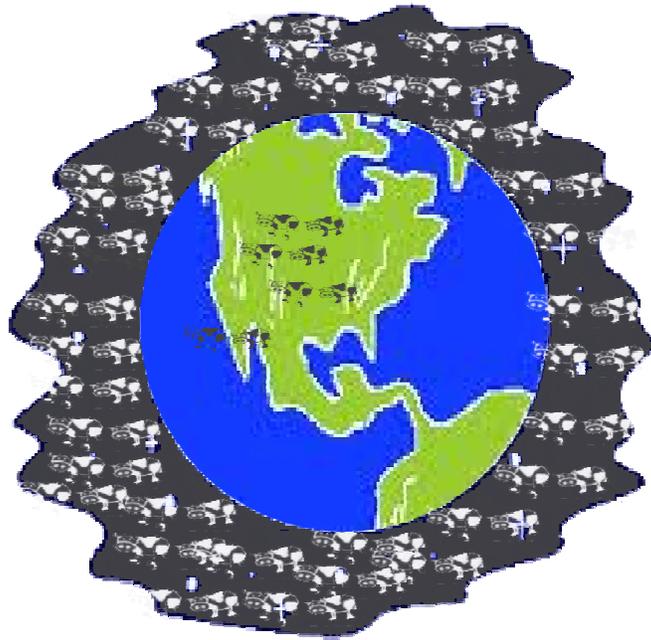

Oh my God! ANOTHER FLASH NEWS ALERT has come in! The same type of phenomena is reported over our own capital city and other major cities around Amerika and indeed the world. President Oflimflama has just cancelled his address to the nation and he and all government officials are taking cover in their underground bunkers. HIGH ALERT People!! Take cover wherever you can. We are going off the air IMMEDIATELY!!

[The escaping anchorman and guests are shown turning over desks and chairs in a mad scramble to get away and seek shelter. Large FARTING sounds are heard as they run away. An off-scene voice is heard saying: These guys just let loose a year's worth of carbon credits!!] (Scene fades)

SCENE # 10 -

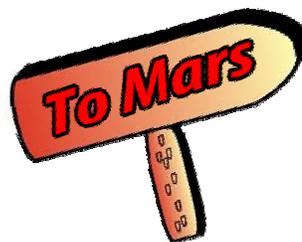

[A chaotic scene is depicted with people running for cover all over the world. Large black and white masses of Mooclear Bombs are encircling the globe and terrorists are poised with shoulder fired missiles to set off a chain reaction explosion that will encircle the entire planet.]

Scene #11 -

[Al Gorrioni, the only survivor of the devastation on earth, is shown riding astride a rocket headed to Mars.]

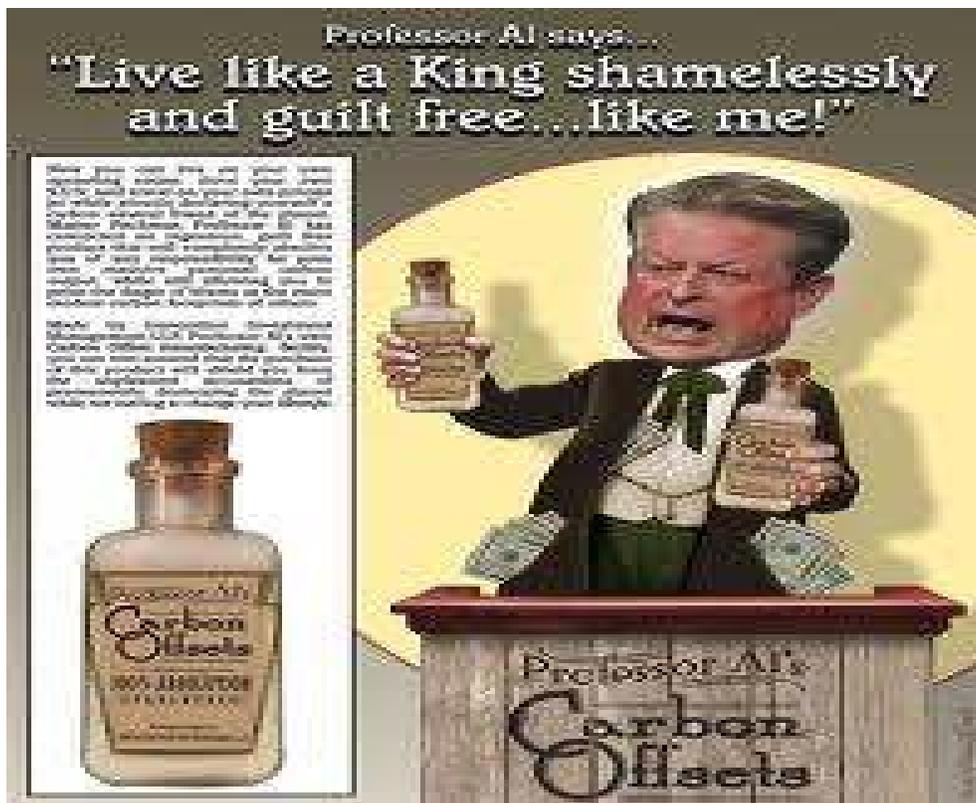

AL Gorrioni: Oh well, maybe the Martians will be open to my scheme and will invest in carbon offset credits. Martians, get ready, get ready, get ready! Here come Al's carbon credits! Gee . . . I hope they have lots of CASH!

Epilogue: Problem solved. No more worries about global warming and carbon footprints; in fact, there won't be any footprints at all – man or beast. Al Gorfioni is on his way to Mars, all the 'infidels' have gone on to their rewards and the 'green' terrorists are enjoying their 72 virgins in the afterlife.

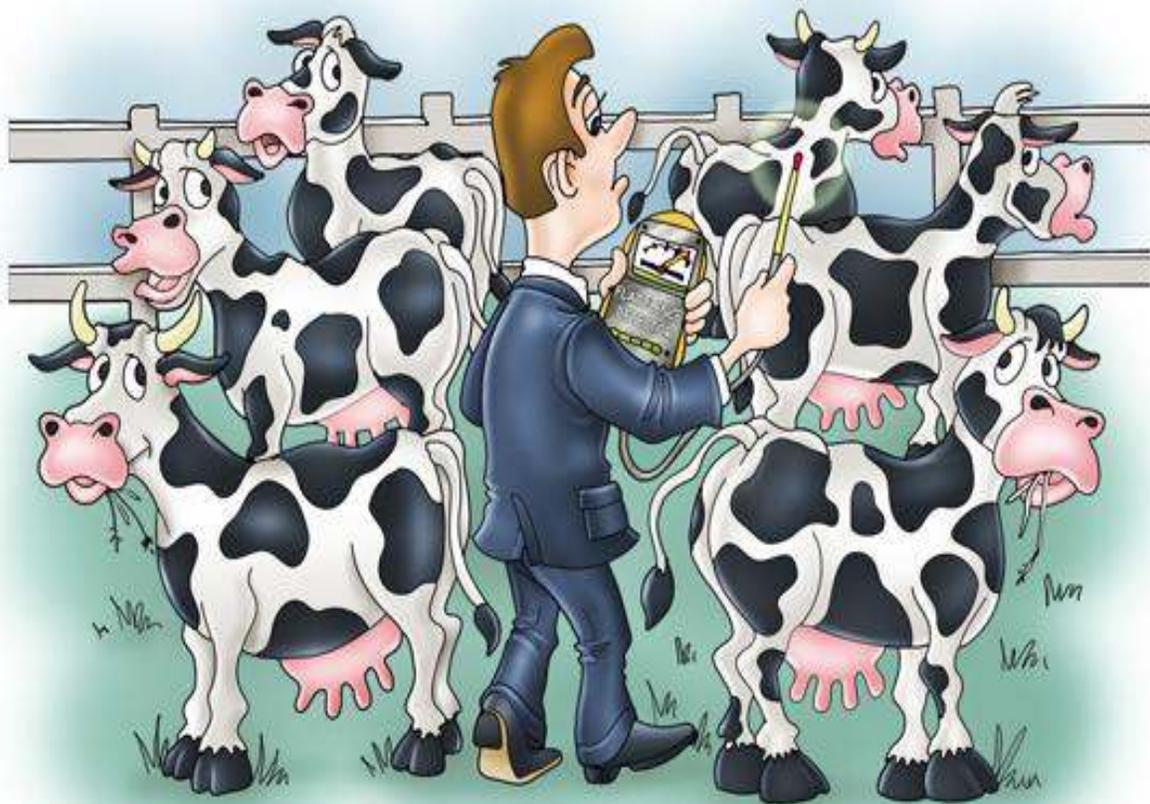

We wonder . . . when the 72 are no longer virgins, do they get a fresh batch???

THE ABSOLUTE END!

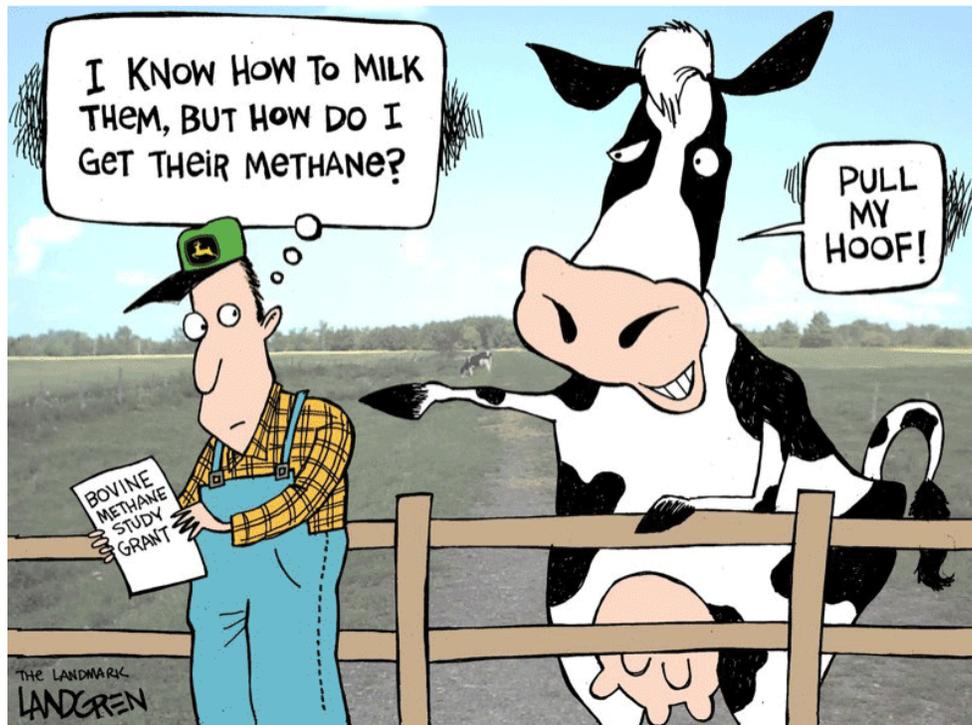

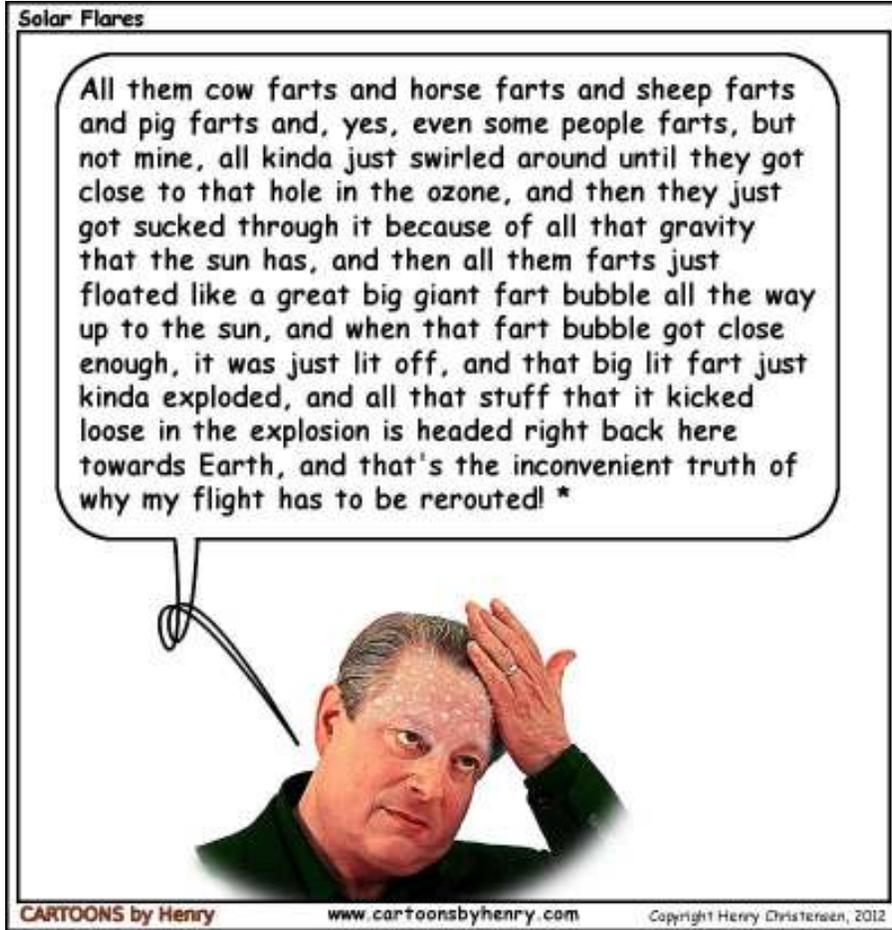

THESE "THINGS" CAUSE GLOBAL WARMING

STOP THEM!

Credits begin to roll -----

An Inconvenient Moovie is a work of fiction. Names, characters, places, and incidents either are the product of the author's imagination or are used fictitiously.
